

CLASSIFY YOURSELF

Determining your skier type is your responsibility!

Your skier type, height, weight, age and boot sole length are used by the shop technician to determine the release/retention settings for your bindings. Consult these descriptions to select your classification. Be sure to provide accurate information. Errors increase your risk of injury.

TYPE 1

Cautious skiing on smooth slopes of gentle to moderate pitch

Skiers who designate themselves as Type 1 receive lower than average release/retention settings. This corresponds to an increased risk of inadvertent binding release in order to gain releasability in a fall. This type also applies to entry level skiers uncertain of their classification.

TYPE 2

Skiers not classified as Types 1 or 3

Skiers who designate themselves as Type 2 receive average release/retention settings appropriate for most recreational skiing.

TYPE 3

Fast skiing on slopes of moderate to steep pitch

Skiers who designate themselves as Type 3 receive higher than average release/retention settings. This corresponds to decreased releasability in a fall in order to gain a decreased risk of inadvertent binding release. Type 3 settings should not be used by skiers of less than 22kg/48lbs.

If you are unsatisfied with the release/retention settings that result from your classification please mention this to your binding technician.
